

LDO VOLTAGE REGULATOR

The diagram illustrates an LDO voltage regulator circuit. The input voltage is labeled VBUS. A 22uF capacitor (C1) is connected between the input and ground (GND). The regulator (U1, AMS1117-3.3) has its input (VI) connected to the input line, its output (VO) connected to the output line, and its ground (GND) connected to the common ground. The output voltage is +3.3V. A 22uF capacitor (C2) is connected between the output and ground. A red LED (D1) is connected between the output and ground through a 1k5 resistor (R3). The LED is labeled PWR_LED_K.

DECOUPLING CAPACITORS

BOOT0 SWITCH

The diagram illustrates the BOOT0 switch circuit. It features a +3.3V power supply connected to one terminal of a switch (SW2). The other terminal of the switch is connected to a green line labeled BOOT0. A 5k1 resistor (R5) is connected between the BOOT0 line and GND.

MOUNTING HOLES

The diagram shows a light blue rectangular plate with a dashed blue border. On the left side, there is a label 'M2' in blue. On the right side, there are four red circular holes arranged vertically. To the right of each hole is a label: 'H1 MountingHole' for the top hole, 'H2 MountingHole' for the second hole, 'H3 MountingHole' for the third hole, and 'H4 MountingHole' for the bottom hole.

CRYSTAL OSCILLATORS

The diagram illustrates a crystal oscillator circuit. A 25MHz crystal (Y1) is connected between pins 1 and 3. Pin 2 is connected to ground (GND). Pin 1 is connected to HSE_IN through a 15pF capacitor (C9). Pin 3 is connected to HSE_OUT through a 15pF capacitor (C11). The other end of both capacitors is connected to ground.

USB-C CONNECTOR
